Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. **Claims 1-12**, drawn to slot armor component, i.e., coil retainer and slot closure in the rotor core, classified in *class 310, subclass 214*.
- II. **Claims 13-22**, drawn to composite material, classified in *class 428, subclass 172*.
- III. **Claims 23-25**, drawn to a profile co-extrusion system, classified in *class 425 subclass 131.1*

The inventions are distinct, each from the other because of the following reasons:

Invention of group I and group II, the slot armor can be fabricated by various material, including paper, resin, fiber and magnetic and nonmagnetic metal materials. Therefore, it is distinct from group II – composite material polymer. On the other hand, the composite material polymer can be used to fabricate other components, e.g. mechanical support components such as bearing holder, brush holder plate, even motor housing. Thus, the two groups are distinct from one another.

Inventions of group I and group III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the slot armor can be made by molding apparatus or casting apparatus having co-extrusion features.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2834

A telephone call was made to the attorney of record on 7/6/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
